

Optional Features & Accessories

Optional Features for nexVortex Service Plans

Multisite Support

Scalable

Nationwide Footprint for Numbers

nexVortex SIP Trunking and Hosted Voice service plans include a set amount of phone numbers (DIDs), local E911 support, and other features depending on your selected service plan. You can easily add service and phone numbers for more locations and remote employees including features such as electronic fax for your growing business.

More Numbers

Additional DIDs	Monthly Cost
1 DID Bundle	\$ 2.00
25 DID Bundle	\$ 25.00
100 DID Bundle	\$ 75.00
250 DID Bundle	\$ 125.00

- Caller ID name is included.
- Number porting included.
- Number port orders that are rescheduled or canceled can be subject to cancellation fees.

Calling Bundles

Calling Bundles	Monthly Cost

10K Inbound DID	\$ 150.00

Toll-Free

Quantity	Monthly Cost
Single Number	\$ 2.00 each
10K Toll-Free	\$ 200.00

Electronic Fax

Electronic Fax	Cost
Electronic Fax Call Paths	\$ 17.99/mo
Optional Analog Fax Gateway	\$ 199.00

- Includes 1 DID (new or ported)
- Includes 200 Outbound Pages/mo
- Includes 200 Inbound DID Pages/mo
- Overage is 3.5 cents per Page

More Locations

E911 Locations	Monthly Cost
Each Additional E911 Location	\$ 2.50

- E911 pricing is based on each physical address registered.
- E911 is not offered outside the United States.

Optional feature pricing is valid for customers on term agreements for Hosted Voice, mSIP, and SIP Trunking (nV150 and larger plans).

Local E911: nexVortex service plans include one registered local E911 address. Each remote phone or physical location must have its own local E911 registration to ensure your phones are routed to the correct (local) 911 PSAP (Public Safety Answering Point).

Electronic Fax (nVFax): Conveniently send and receive electronic faxes and save money compared to using a traditional fax line service. If required, an optional analog gateway can be ordered for any business wishing to keep their traditional fax machine in operation while taking advantage of SIP, or Hosted Voice.

High Quality, Symmetrical Internet Access: High quality internet access is the foundation for your business applications. Upgrade your current connection or add a second failover connection from nexVortex. nexVortex provides 10 Mbps, 20 Mbps, 50 Mbps and higher speed Ethernet circuits. Each circuit is managed, monitored, and supported by nexVortex. Managed SIP customers can have the added benefit of CoS (Class of Service).

Other Features: nexVortex provides a number of advanced features free-of-charge to SIP Trunking and Hosted Voice customers. Popular features include autodetecting disaster recovery for SIP Trunking customers as well as call recording and use of our mobile app for Hosted Voice customers.

Contact nexVortex for questions on any of these services or for information on how to order optional features.
